DETAILED ACTION

EXAMINER'S AMENDMENT

In the claims, line 2 of claim 8 is to read:

claim 6 and or claim 7 wherein said means include various shapes including a

Allowable Subject Matter

Claims 1-14 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to disclose or render obvious a multi-purpose hand held sprayer assembly having a vertical shut-off valve which, the sprayer comprises three distinctive segments. First, a controller for regulating flow of the fluid and having an elongate body incorporating the vertical shut-off valve. Also included within the controller is an inlet including a coupler for communication with a pressurized fluid source, and an outlet including an opening having an adapter arranged with multiple sizes of diameters for a quick connection. A channel internally links for flow of the fluid from the inlet to the outlet through the vertical shut-off valve, and an exterior having a slim body for a handgrip and a contour on said body for being placed in a holder. The second segment of the assembly is an extension bar carrying the fluid to a distant area and having a body being formed with a tubular shape, an inlet including an adapter arranged with multiple sizes of diameters for a quick connection to the outlet of the controller, and an outlet including an adapter arranged with multiple sizes of diameters for a quick connection to the third segment. Also included, O-rings on the inlet and the

Art Unit: 3752

outlet provide a quick connection to afford sealing and friction, and a channel that internally links for flow of the fluid from the inlet to the outlet for spouting the fluid in a single stream, and an exterior contour on the body for being placed in a holder. The third segment is a spray tip performing distribution of the fluid in the air and having a body curved at various angles, an inlet including an adapter arranged with multiple sizes of diameters for a quick connection to the outlet of the extension bar, an outlet opening for releasing fluid having an internal base for placing an O-ring, a cover plate for the outlet opening contained various sizes and patterns of small holes for fine multiple streams of fluid, an O-ring placed in the outlet opening for the cover plate to seal, a chamber at the inlet offering a buffer for an occurrence that the inlet is not aligned with the outlet of the extension bar, and a channel that internally links from the inlet through said chamber to said outlet. The connection of all three segments makes the sprayer assembly.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure is as follows:

U.S. Patent No. 3,866,839 to Manger, disclosing a torch head

U.S. Patent No. 5,050,802 to Gill et al., disclosing a vertical valve

U.S. Patent No. 5,735,467 to Lee, disclosing a shower device

U.S. Patent No. 6,269,821 to Berke et al, disclosing an aerosol applicator

U.S. Patent No. 6,422,485 to Hsu, disclosing a pistol nozzle

U.S. Patent Application No. 2004/0188551 A1 to Evans, disclosing an atomizer
